Priya Nandakumar

priya.nandakumar@example.test | 555-0101 (fictional) | Sampleville

SUMMARY

Recent data science graduate with internship experience in analytics. Comfortable writing SQL queries, cleaning messy datasets in Python, and building dashboards for non-technical audiences.

EDUCATION

B.Sc. in Statistics, Larchmont University (fictional), 2025

SKILLS

Python (pandas, NumPy, matplotlib), SQL (PostgreSQL), data cleaning, descriptive statistics, hypothesis testing, linear regression, Tableau, AWS (S3, basic EC2)

EXPERIENCE

Data Analyst Intern, Northfield Retail Group (fictional), Jun 2024 - Aug 2024

- Wrote SQL queries with joins and aggregations in PostgreSQL to pull weekly sales data for a regional reporting team.
- Cleaned a 200,000-row sales dataset in Python (pandas) by removing duplicate records, standardizing date formats, and imputing missing values in the price column.
- Ran t-tests to compare average order values between two promotion groups and summarized results in a one-page report.
- Built a Tableau dashboard showing weekly sales by region, used by the team in Monday meetings.

Project: Customer Churn Analysis (university capstone)

- Used Python to explore a public telecom churn dataset, calculating summary statistics and correlations between usage and churn.
- Fit a logistic regression model and reported accuracy and key predictors.
- Stored the project dataset in an AWS S3 bucket and loaded it into a notebook for analysis.
